
CAREER SNAPSHOT

- ◆ **10+ years of experience** as a **Backend Developer** with expertise in **Python**.
- ◆ **3+ years of experience** in leading and mentoring development teams.
- ◆ Extensive experience in building **microservices** and scalable backend architectures.
- ◆ Proficient in backend frameworks: **Django, Flask, FastAPI, Sanic**.
- ◆ Strong expertise in **Kafka, RabbitMQ** for real-time data streaming and messaging.

Testing & Test-Driven Development (TDD)

- ◆ Expertise in **PyTest** and **UnitTest** for writing automated test cases.
- ◆ Implementing **mocking, fixtures, and parameterized testing** for API and backend validation.
- ◆ Continuous integration testing using **GitHub Actions, GitLab CI/CD, and Bitbucket Pipelines**.

- ◆ Experience in **integration testing, functional testing, and performance testing**.
- ◆ Writing **unit tests, API tests, and end-to-end tests** to ensure application stability.
- ◆ CI/CD integration with **SonarQube** to ensure code quality and security compliance.

Asynchronous Task Processing & Background Jobs

- ◆ Expertise in **Celery** for distributed task queues and asynchronous job processing.
- ◆ Implementing **Celery with Redis & RabbitMQ** for scalable background jobs.
- ◆ Managing periodic tasks using **Celery Beat**.
- ◆ Optimizing task execution and retries for high availability.

Linux Server Scripting & Automation

- ◆ Proficient in **Bash scripting** for server automation and system administration.
- ◆ Managing **cron jobs** for scheduled tasks and proactive server health checks.
- ◆ Writing shell scripts for **log rotation, system monitoring, and backup management**.
- ◆ Experience with **systemd services**, process management, and performance tuning.
- ◆ Automating server provisioning and deployments using **Ansible** and scripting.
- ◆ Integrated **Redfish APIs** in automation scripts to retrieve and monitor hardware metrics (CPU, memory, storage, power, thermal data).
- ◆ Built custom shell and Python tools to interact with **Redfish-enabled servers** for real-time monitoring and asset tracking.

Database Expertise

- ◆ **SQL**: MySQL, PostgreSQL
- ◆ **NoSQL**: AWS DynamoDB, Couchbase, MongoDB

Caching Mechanisms

- ◆ Implementing **Redis** for caching, session management, and real-time analytics.
- ◆ Using **Redis Pub/Sub** for event-driven architectures.
- ◆ Optimizing API performance with **Redis and Memcached**.

Cloud Expertise

- ◆ Proficient across **Azure, AWS, and GCP**.
- ◆ Experience in **serverless computing** (AWS Lambda, Azure Functions, GCP Cloud Functions).

Containerization & DevOps

- ◆ Experience in **Docker** for scalable deployments.
- ◆ Hands-on experience with **CI/CD, DevOps**, and **cloud automation**.

Project & Agile Management Tools

- ◆ Expertise in **JIRA, Rally, Trello, Azure DevOps** for sprint planning, issue tracking, and workflow automation.
- ◆ Agile methodologies: **Scrum & Kanban**.

Version Control & CI/CD Tools

- ◆ Expertise in **GitHub, GitLab, and Bitbucket** for source code management, collaboration, and automated CI/CD pipelines.
- ◆ Experience in **Git workflows (GitFlow, Trunk-based development, Feature Branching, etc.)**.
- ◆ Managing **branch protection, code reviews, and security best practices**.

Logging & Monitoring

- ◆ Expertise in **Datadog, Kibana, Grafana, and ELK Stack** for real-time monitoring and log analysis.
- ◆ Setting up **Datadog APM (Application Performance Monitoring)** for backend services.

Authentication & Security

- ◆ Strong background in **RBAC (Role-Based Access Control) and ABAC (Attribute-Based Access Control)** for secure authentication and authorization.
- ◆ Experience in **OAuth 2.0, JWT, OpenID Connect, and SAML authentication mechanisms**.
- ◆ Security best practices for **API authentication, encryption, and token management**.
- ◆ Passionate about **high-performance systems, scalability, and security**.

EXPERIENCE

- STL Digital – 28-Dec-2023 to 24 Jan-2025
- Talent500 – 24-Jan-2022 to 26-Dec-2023
- One Trust – 10-March-2021 to 20-Jan-2022
- Affluent global services – 01-Dec-2019 to 05-March-2021
- Mode India Pvt LTD – 24-Nov-2014 to 22-Nov-2019

Project Portfolio

STL DIGITAL

Dec' 2023 – JAN' 2025

Project 14: Clear-View (Australia) ↑

Domain	Oil and Gas
Client	Worley
Description	ClearView provides a transparent, interactive and comprehensive way to assets the LNG carbon intensity across the value chain.it enables LNG producers,

	buyer and regulators to benchmark their performance internally and across industry, comply with international standards and identify emission-related risks.
Role	Sr. Backend Developer

Responsibilities

Technical Leadership & Development

- ✓ **Architect and Develop** scalable microservices for ClearView:
 - ◆ **Backend Services** – Django 🐍
 - ◆ **Calculation API** – FastAPI ⚡
 - ◆ **Caching Mechanism** – Redis 🚀
 - ✓ **Implement** 🔒 **RBAC (Role-Based Access Control)** for secure access management.
 - ✓ **Design & Maintain** 🌐 **SAAS Infrastructure**, ensuring multi-tenant support.
 - ✓ **Optimize APIs & Services** 📊 to comply with international LNG carbon intensity standards.
 - ✓ **Ensure System Reliability** 📡 with logging, monitoring & Kafka event streaming.
 - ✓ **Database Management** 🗄️ PostgreSQL – optimizing for high performance.
-

Project & Release Management

- ✓ **Create & Manage User Stories** 📝 based on project requirements.
 - ✓ **Break Down User Stories** 📌 into subtasks and assign them to the team.
 - ✓ **Conduct Code Reviews** 👁️ for all Pull Requests (PRs) and provide approvals.
 - ✓ **Create Release Documents** 📄 detailing new features, fixes, and improvements.
 - ✓ **Manage Release & Deployment** 🚀 to production, ensuring minimal downtime.
-

Client & Team Collaboration

- ✓ **Discuss Requirements with Clients** 📁 to gather detailed specifications.
 - ✓ **Collaborate with Frontend Teams** 🎨 for seamless API integration.
 - ✓ **Lead Team Discussions & Mentorship** 📢 improving coding standards.
 - ✓ **Ensure Security & Code Quality** 🔍 using:
 - 🛡️ **SonarQube** – Static Code Analysis
 - 🛡️ **Trivy** – Container Security Scanning
-

Tech Stack

✓ Programming & Frameworks

⚡ Python (FastAPI) , 🐍 Python (Django), ☁ Azure (AKS, Azure Functions, Blob Storage, App Insights, AD, DevOps), 🗄 PostgreSQL, Redis, 🔄 Kafka, Celery, 🔒 OAuth2, JWT, Encryption, ISO Compliance, 🐳 Docker, Azure DevOps

👥. Team Size : 22

Project 13: Envizi-Sustanibility (Australia) ↑

Domain	Oil and Gas and Energy
Client	Worly
Description	For a predetermined group of utility suppliers, this solution automates the extraction of data from utility invoices in PDF format. The solution receives one or more input files, extracts the necessary data according to predetermined business rules and feed it into a data template. The updated template is then uploaded to the Envizi system along with attaching the corresponding invoices
Role	Sr. Backend Developer

👤💻 Responsibilities

◆ Backend Development & System Architecture

✓ Design & Develop scalable Django & Django REST Framework (DRF) based backend services. 🐍

✓ Build RESTful APIs using Django REST Framework (DRF) for seamless communication. 🌐

✓ Implement OCR-based Data Extraction using TesseractOCR 📄 → 📊.

✓ Integrate & Automate Data Upload into Envizi API 🚀.

✓ Manage File Storage & Processing using Azure Blob Storage ☁.

✓ Ensure Authentication & Security via Azure AD 🗝.

✓ Optimize Database Performance for Microsoft SQL Server 🗄.

◆ Quality Assurance & Security

✓ Perform Static Code Analysis using SonarQube 📊.

✓ Ensure Container Security with Trivy 🛡.

✓ Implement Logging & Monitoring via Azure App Insights 🔍.

✓ Maintain Security & Compliance following industry best practices.

◆ DevOps & Release Management

- ✓ Manage CI/CD Pipelines with Azure DevOps & Azure CI/CD ⚙️.
 - ✓ Automate Deployment on Azure VM 🖥️.
 - ✓ Oversee Release Management, ensuring smooth production deployments.
-

◆ Leadership & Team Collaboration

- ✓ Lead a Backend Team of developers, guiding best practices. 📢
 - ✓ Conduct Code Reviews & approve PRs, ensuring high-quality code. 👁️
 - ✓ Break Down Tasks & Assign Work in Azure DevOps. 📝
 - ✓ Collaborate with Frontend & Data Teams for seamless integration. 🤝
 - ✓ Discuss Requirements with Stakeholders to refine business needs. 🗑️
-

🔧 Tech Stack

🦹 Django, Django REST Framework (DRF), ♣️ Azure VM, Azure AD, Azure Blob Storage, Azure App Insights, 🗄️ Microsoft SQL Server, Envizi API, 📄 TesscartOCR, 🛡️ SonarQube, Trivy, ⚙️ Azure DevOps, Azure CI/CD

👥. Team Size : 14

Project 12: Payroll Verification Automation (INDIA) ↑

Domain	Oil and Gas and Energy
Client	Worly
Description	Verification of payroll document like Candidate PIL information according to country. INDIA: 1. Pan Card 2. Aadhar Card

	3. UAN Number 4. Bank Account
Role	Sr. Backend Developer

Responsibilities

Backend Application Development & Event-Driven Processing

- ◆ Develop a **real-time document processing system** that triggers when a file is uploaded to a specific folder (Azure Blob Storage / SharePoint).
- ◆ Design an **event-driven architecture** using **Azure Functions** / **FastAPI** to detect and process new files automatically.
- ◆ Implement **API endpoints** for document validation and retrieval.

Document Processing & AI-Based Verification

- ◆ Build an **OCR-based extraction engine** to read key payroll details from PDFs & Word documents.
- ◆ Develop **AI-based matching algorithms** to verify extracted details against predefined compliance rules.
- ◆ Implement a **confidence score & accuracy check** for data validation.

Deployment, Monitoring & Scalability

- ◆ Deploy the application on **Azure Kubernetes Service (AKS)** for scalability.
- ◆ Implement **CI/CD pipelines** for automated deployment & updates.
- ◆ Set up **Azure App Insights** for real-time monitoring, error tracking, and performance optimization.

Project Documentation (SDD) & Compliance

- ◆ Create detailed **Software Design Documents (SDD)** explaining architecture, workflows & API structures.

SharePoint Integration & Secure Storage

- ◆ Configure **SharePoint & Azure Blob Storage** for secure document handling.
- ◆ Implement **RBAC (Role-Based Access Control)** to ensure that only authorized users can access sensitive payroll data.
- ◆ Automate **file categorization & indexing** for fast retrieval from a database.

Tech Stack Used

 Python |
  FastAPI |
  SharePoint |
  Azure Blob Storage
 Azure AD |
  Azure Kubernetes Service (AKS) |
  OCR (PDF & Word Processing)
 Azure App Insights |
  Event-Driven Architecture

 Team Size : 7

Project 11: Smart Doc (Australia)

Domain	Oil and Gas and Energy
Client	Worly
Description	Extract data from multiple file like pdf,excel and word. After find the accuracy of word. The main purpose of find the exact location of documents in 1M records.
Role	Sr. Backend Developer

Responsibilities

System Design & Architecture

- ✓ Architect a **highly scalable** document search system using **OpenAI embeddings** and **vector databases**.
- ✓ Design **RBAC (Role-Based Access Control)** to manage different levels of access for users.
- ✓ Ensure **high availability and low-latency search performance** for large-scale document storage.

Document Processing & Data Pipeline

- ✓ Develop an **automated pipeline** to extract text from **PDF, Excel, and Word** documents.
- ✓ Implement **parallel processing** using **multiprocessing/Ray** to handle large datasets efficiently.
- ✓ Build **data cleaning and normalization** modules to improve accuracy.

AI-Powered Search & Retrieval

- ✓ Implement **OpenAI's text-embedding-ada-002** model for **semantic search**.
- ✓ Enhance **query processing** by integrating **natural language understanding (NLU)**.

Cloud Infrastructure & Deployment

- ✓ Deploy the system using **Azure Blob Storage, Azure AD, Azure EKS, and Docker**.
- ✓ Implement **CI/CD pipelines** for smooth deployments using **Azure DevOps**.
- ✓ Optimize **API performance** using **FastAPI and caching mechanisms (Redis)**.

Security & Compliance

- ✓ Implement **RBAC** to ensure secure access to documents and search features.
- ✓ Integrate **SharePoint authentication and permissions** for secure document access.
- ✓ Ensure compliance with **data privacy regulations (GDPR, HIPAA, etc.)**.

Monitoring & Performance Optimization 📊⚡

- ✓ Set up **Azure Application Insights** for real-time system monitoring and logging.
- ✓ Optimize **search queries** for speed and accuracy in large datasets.
- ✓ Conduct **load testing** to ensure the system performs under **high traffic**.

Project Documentation & Collaboration 📄🤝

- ✓ Create **Software Design Documents (SDD)** detailing architecture and workflows.
- ✓ Maintain **technical documentation** for system scalability and enhancements.
- ✓ Work closely with **data scientists, cloud engineers, and security teams** to improve the solution.

🔧 Tech Stack Used

- 💻 **Backend:** Python, FastAPI
- ☁️ **Cloud & Infrastructure:** Azure Blob Storage, Azure AD, Azure EKS
- 🗄️ **Databases:** Azure MicrosoftSQL Server
- 📊 **Monitoring & Logging:** Kibana
- 🔗 **Frontend API Integration:** RESTful APIs
- ⚙️ **DevOps:** Docker, Azure DevOps
- 🤖 **AI Models:** OpenAI (text-embedding-ada-002)

👥. **Team Size : 8**

Talent500

JAN' 2022 – DEC' 2023

Project 10: RPM (Remote Patient Monitoring) (USA) ↑

Domain	Health Sector
Client	BioFi
Description	Biofi's ability to precisely identify and track heart rate, HRV and respiration automatically and in real-time without contact will significantly reduce costs during and throughout human recovery in alternative settings. Not to be overlooked, the value of real-time presence detection will aid in fall prevention and provide much-needed indicators for wandering residents. BioFi can be customized to fit the individual needs of residents to maximize response time and improve care conditions.

	The Remote Monitoring Platform and our SAAS solutions for remote care will provide caregivers with a reliable and accurate system for detecting vitals and presence.
Role	Sr. Backend Developer

Responsibilities

Application Design & Development

- ✓ Architect and develop a **scalable, high-performance** remote patient monitoring system.
- ✓ Implement core **backend services** using **Python, FastAPI, and Sanic**.
- ✓ Enable **real-time patient data processing** using WebSockets
- ✓ Ensure **data isolation & security** for different organizations using **RBAC**.
- ✓ Design and implement a **multi-tenant architecture** with **RBAC**

IoT Data Integration & Processing

- 🔗 Establish **secure communication** between **IoT devices** and the backend.
- 📊 Process **real-time patient vitals** from wearable devices and sensors.
- 💾 Store and manage data efficiently using **MongoDB and Redis**.

API Development & Frontend Integration

- 🔄 Develop **RESTful APIs** for **frontend applications** to display patient vitals.
- ⚡ Optimize API performance with **Redis caching** and **AWS S3** storage.
- 🎨 Collaborate with frontend teams to ensure seamless **UI/UX integration**.

System Performance & Scalability

- ☁️ Deploy applications on **AWS EC2 & Docker containers** for scalability.
- 📈 Implement **real-time monitoring & log analysis** with **Kibana**.
- ⚙️ Optimize database queries for **MongoDB** storage.

Team Mentorship & Collaboration

- 🎓 Mentor and guide junior developers on **backend best practices**.
- 🤝 Work with **Data Science teams** for **predictive patient analytics**.
- 🔧 Assist **DevOps teams** in ensuring **smooth CI/CD pipeline execution**.

Security & Compliance

- 🛡️ Implement **HIPAA-compliant security** measures for patient data.
- 🔒 Encrypt data **at rest and in transit** with security protocols.
- 📋 Ensure regulatory compliance with **GDPR and healthcare data protection laws**.

Tech Stack Used

- 💻 **Backend:** Python, Sanic, FastAPI
- 📡 **Real-time Communication:** WebSockets
- ☁️ **Cloud & Infrastructure:** AWS EC2, Docker, S3 Bucket

-  **Databases:** MongoDB, Redis
-  **Monitoring & Logging:** Kibana
-  **Frontend API Integration:** RESTful APIs
-  **DevOps:** CI/CD Pipelines, Dockerized Deployments

 **Team Size : 14**

Project 9: (PBM)Pharmacy Benefit Managers (USA) ↑

Domain	Pharmacy, Claim, Health Sector
Client	Flipt
Description	Pharmacy Benefit Managers (PBMs) play a crucial role in the healthcare system, managing prescription drug programs that directly impact patient care. Despite their importance, PBMs confront significant challenges, from complex pricing structures, outdated technology, and increasing regulations. This lack of nimbleness complicates compliance, inflates costs, and undermines trust among pharmacies, patients, and regulatory bodies. As healthcare evolves, so does the demand for PBMs to adopt transparent, efficient, and adaptive services.
Role	Sr. Backend Developer

Responsibilities

Application Development & Architecture

- **Designed and developed a patient pre-approved medicine application** to streamline prescription approvals.

- Implemented **secure patient identification** using unique **Patient ID** to retrieve medical history and prescription details.
- Built a **scalable backend** to manage prescription records, insurance approvals, and compliance requirements.

Patient Data & Prescription Management

- Developed APIs to **fetch patient medical records** based on **Patient ID** and determine eligibility for pre-approved medications.
- Integrated **electronic health records (EHR)** to auto-populate prescription details and ensure compliance with healthcare regulations.
- Ensured **data privacy & security** by implementing **RBAC (Role-Based Access Control)** and **ABAC (Attribute-Based Access Control)**.

Insurance & Compliance Integration

- Implemented **automated insurance verification** to check whether a prescribed medicine is **pre-approved or requires further approval**.
- Ensured compliance with **HIPAA, FDA, and CMS** regulations for secure data handling and transmission.

Real-Time Notifications & Alerts

- Developed a **real-time notification system** to alert patients and pharmacies about **pre-approved medications, pending approvals, and prescription renewals**.
- Integrated **email & SMS notifications** for doctors, patients, and pharmacists.

Support & Incident Management

- Handled **support tickets** related to application performance, user access, and data inconsistencies.
- Provided **quick resolutions** to minimize downtime and ensure uninterrupted service.
- Created detailed **documentation** for recurring issues to streamline future troubleshooting.

Bug Fixing & System Stability

- Identified and resolved **critical software bugs** affecting prescription pricing, claim processing, and compliance reporting.
- Worked with **QA teams** to test patches before deployment to production.
- Optimized **database queries and API performance** to improve system responsiveness.

Collaboration & Process Improvement

- Worked closely with **development and DevOps teams** to streamline issue resolution.

- Suggested **workflow improvements** to reduce system errors and enhance user experience.

Monitoring & Optimization

- Integrated **Datadog** for **real-time monitoring, application logs, error tracking, and performance analysis**.
- Used **Datadog APM (Application Performance Monitoring)** to track API response times and optimize Couchbase queries.
- Set up **log-based alerts in Datadog** to detect issues in real time and reduce downtime.

Tech Stack

- ✓ **Backend:** Python (Flask)
- ✓ **Database:** Couchbase (NoSQL)
- ✓ **APIs:** REST, GraphQL
- ✓ **Authentication:** OAuth2, JWT, AWS Cognito
- ✓ **Cloud & Deployment:** AWS (EC2, S3, IAM, RDS, Lambda)
- ✓ **Monitoring & Logging:** Datadog (APM, Log Management, Alerting)
- ✓ **Messaging & Communication:** RabbitMQ, WebSockets, Email & SMS API

Key Achievements

- ✓ Successfully developed and deployed the **Patient Pre-Approved Medicine Application** handling **secure prescription approvals**.
- ✓ **Reduced approval processing time** by automating insurance verification and patient data retrieval.
- ✓ Improved **data security & compliance** through role-based access controls and encryption.
- ✓ Enhanced **monitoring and real-time insights** using **Datadog**, ensuring system reliability and proactive issue resolution.

 **Team Size : 9**

Project 8: Gordy Health (USA) ↑

Domain	Health Sector
Client	Gordy
Description	Gordy Health is a healthcare technology platform that provides online heart-related medical services and real-time interactions between patients and

	doctors. The platform is designed to offer seamless, efficient, and secure healthcare services, ensuring accurate diagnostics and timely treatments.
Role	Sr. Backend Developer

Responsibilities

System Architecture & Development

- Designed and developed the **enterprise onboarding system** for hospitals, clinics, and independent doctors.
- Implemented **secure authentication & role-based access control (RBAC & ABAC)** for different users (patients, doctors, administrators).

Real-Time Sensor Data Processing & API Development

- Developed APIs to **collect, process, and display real-time sensor data** (e.g., heart rate, pulse, oxygen levels) in the frontend.
- Integrated **FastAPI** to serve patient health records efficiently.
- Optimized database queries in **PostgreSQL/MongoDB** for faster data retrieval.

Real-Time Data Streaming & WebSocket Integration

- Integrated **WebSockets** for real-time patient monitoring.
- Ensured **low-latency communication** between IoT devices, backend, and the healthcare dashboard.
- Implemented **Kafka/RabbitMQ** for streaming high-frequency health data.

Collaboration with Data Science

- Worked closely with the **data science team** to extract meaningful insights from real-time health data.
- Provided APIs for **machine learning models** to analyze heart health patterns.

Cloud Deployment & DevOps

- Deployed **scalable microservices on AWS EC2 & Kubernetes** for better performance.
- Integrated **AWS S3** for storing patient reports & historical health data.
- Used **Prometheus + Grafana/Kibana** for monitoring system performance and health metrics.

Security & Compliance

- Ensured **HIPAA-compliant** security measures for handling patient data.
- Implemented **data encryption & secure API authentication** using OAuth 2.0.

Team Leadership & Mentorship

- Managed and mentored a **cross-functional team of developers, data scientists, and DevOps engineers**.
- Conducted **code reviews, sprint planning, and agile workflow management** using Jira.
- Ensured seamless collaboration between **backend, frontend, and AI teams**.

 Tech Stack

- ✓ **Backend:** Python (FastAPI, Django)
- ✓ **Database:** PostgreSQL, MongoDB, Redis
- ✓ **Real-Time Communication:** WebSockets, Kafka, RabbitMQ
- ✓ **Cloud & DevOps:** AWS EC2, Kubernetes, Docker, Prometheus, Grafana, Kibana
- ✓ **Security & Auth:** OAuth 2.0, JWT, HIPAA Compliance
- ✓ **APIs & Integrations:** Sensor IoT API, AI/ML Model API

 Key Achievements

- ✓ **Built a scalable and secure healthcare platform** for real-time heart monitoring.
- ✓ Successfully **integrated WebSocket & Kafka** for instant data streaming.
- ✓ Improved **system performance & response time** for real-time patient insights.
- ✓ Led a **highly efficient tech team**, ensuring smooth execution of all features.

 Team Size : 14

**Project 7: Talent500 (INDIA) **

Domain	Job Portal
Client	Talent500
Description	Talent500 is a global talent marketplace that connects top-tier professionals with leading companies worldwide. It enables enterprises to build and manage distributed teams efficiently, leveraging AI-driven talent matching, remote hiring solutions, and workforce management tools.
Role	Sr. Backend Developer

Responsibilities

Google Authentication & Secure Login System

- ✓ Developed **Google OAuth 2.0 authentication** for seamless candidate sign-in.
- ✓ Ensured **secure token management** and compliance with OAuth best practices.
- ✓ Integrated **JWT-based authentication** for API security and user session management.

Candidate Onboarding Process

- ✓ Designed and developed the **end-to-end candidate onboarding workflow**.
- ✓ Developed **resume parsing and profile validation mechanisms**.
- ✓ Developed **role-based access control (RBAC)** for different user types.

Resume Parsing & Candidate Information Extraction

- ✓ Developed a system to **read and extract information from PDF & Word resumes**.
- ✓ Utilized **Python libraries like PyPDF2, pdfplumber, docx2txt, and Spacy** for text extraction.
- ✓ Developed **AI-based entity recognition** to extract **candidate name, skills, experience, education, and contact details**.
- ✓ Stored parsed data in **PostgreSQL/MongoDB** for efficient retrieval.

Intelligent Candidate Search Algorithm

- ✓ Designed an **optimized search algorithm** to match candidates with job descriptions.
- ✓ Used **Elasticsearch** for full-text search and ranking based on **skills, experience, and location**.
- ✓ Developed **filters for job seekers based on industry, salary expectations, experience level, etc.**

Job Portal Integrations

- ✓ Integrated Talent500 with leading job platforms:
- ✓ **Naukri** – Automated **job listing sync** & candidate profile retrieval.
- ✓ **CareerJet** – Integrated **job search API** for broader job visibility.
- ✓ **LinkedIn** – Candidate profile enrichment and job recommendations.
- ✓ **Indeed** – Job listing aggregation & applicant tracking.
- ✓ Built **asynchronous data pipelines** to sync job data efficiently.

Graylogs Setup for Monitoring & Log Analysis

- ✓ Set up **Graylogs dashboards** for monitoring backend services and job applications.
- ✓ Integrated **Elasticsearch** for centralized logging and real-time analytics.
- ✓ Configured **alerts for system failures, job processing errors, and candidate onboarding issues**.

Docker & Deployment on AWS Cloud

- ✓ Created **Dockerfiles** for containerized microservices.
- ✓ Deployed the application on **AWS EC2** and managed infrastructure via **AWS IAM, VPS, and S3**.
- ✓ Set up **CI/CD pipelines** using **GitHub Actions & AWS CodePipeline**.

Team Leadership & Agile Development

- ✓ Led a **team of backend engineers**, mentoring them in **Python, Django, and FastAPI**.
- ✓ Conducted **code reviews**, ensured adherence to best coding practices, and optimized backend performance.
- ✓ Managed **SCRUM processes**, handled **sprint planning, task allocation, and retrospective meetings**.

Tech Stack

- ✓ **Backend:** Python, Django (DRF)
- ✓ **Authentication:** Google OAuth 2.0, JWT, Role-Based Access Control (RBAC)
- ✓ **Databases:** PostgreSQL, MongoDB, Redis
- ✓ **Resume Parsing:** PyPDF2, pdfplumber, docx2txt, AWS OCR,
- ✓ **Email Services:** AWS SES, SMTP, Celery
- ✓ **Cloud & DevOps:** AWS EC2, AWS IAM, AWS S3, Docker
- ✓ **Monitoring & Logging:** Elasticsearch, Graylogs
- ✓ **Messaging Queues:** Kafka, RabbitMQ
- ✓ **CI/CD & Deployment:** GitHub Actions, AWS CodePipeline
- ✓ **Job Portal Integrations:** Naukri, CareerJet, LinkedIn, Indeed

 **Team Size : 11**

Project 6: TugBoatLogic (World-Wide) ↑

Domain	Governance and audit management platform
Client	OneTrust
Description	TubgbotLogic is an advanced governance and audit management platform that integrates with 108+ third-party tools such as Datadog, Azure, Bitbucket, Workday, AWS, Git, GitLab, and more. The platform enables organizations to automate compliance, enforce InfoSec policies, and manage security audits across diverse cloud and DevOps environments.
Role	Backend Developer

 Responsibilities**Multi-Platform Integrations (🔗 108+ Services)**

✓ Develop, maintain, and optimize integrations with:

- **GitLab, GitHub** (Code security, repositories)
- **Jira, Workday** (Project management, HR governance)
- **AWS, Azure, Google Cloud** (Cloud security & compliance)
- **Slack** (Real-time governance alerts & notifications)
- More

SaaS, RBAC & ABAC Implementation

- ✓ Enforce **role-based (RBAC) & attribute-based (ABAC) access control**
- ✓ Implement **multi-tenant governance** for enterprise security

User Registration & Authentication

✓ **Develop & implement user registration flow** with email/password, OAuth (Google, GitHub, Azure AD).

- ✓ Secure **authentication & authorization** using **JWT & OAuth 2.0**.
- ✓ Implement **RBAC (Role-Based Access Control) & ABAC (Attribute-Based Access Control)** for secure user management.
- ✓ Setup **Multi-Factor Authentication (MFA)** using OTP or Google Authenticator.
- ✓ **Audit user activities** and maintain logs using **Elasticsearch & Kibana**.

Product Onboarding & Configuration

- ✓ **Automate product onboarding** workflow with dynamic configurations.
- ✓ Develop APIs for **product registration, settings, and integration management**.
- ✓ Implement **custom rules & policies** for different products using a scalable architecture.
- ✓ Ensure **seamless integration** with 108+ third-party services (GitHub, GitLab, Jira, Workday, AWS, Azure, Slack, etc.).

Backend Development & Cloud Deployment

- ✓ Build scalable **Django + FastAPI microservices** for authentication & onboarding.
- ✓ Manage **PostgreSQL & MongoDB** databases for storing user & product configurations.
- ✓ Utilize **Kafka & RabbitMQ** for event-driven user and product provisioning.
- ✓ **Monitor system performance & logs** using **Kibana & Elasticsearch**.

Enterprise Deployment on AWS EC2, VPS & IAM (Per Enterprise Tenant)

- ✓ Deploy **individual EC2 instances per enterprise** using **AWS Auto Scaling Groups**.
- ✓ Utilize **AWS VPC (Virtual Private Cloud)** for **secure communication** between EC2 instances.
- ✓ Automate **infrastructure provisioning** using **Terraform & Ansible**.
- ✓ **Optimize cost & performance** by implementing **AWS Auto Scaling & Load Balancing**.
- ✓ Use **AWS ALB (Application Load Balancer)** for distributing traffic among multiple EC2 instances.
- ✓ **Secure deployments** using **AWS IAM, Security Groups & AWS Secrets Manager**.
- ✓ **Monitor system logs & application health** via **AWS CloudWatch, Kibana, and Elasticsearch**.

Tech Stack

- ✓ **Backend:** Django (DRF), FastAPI
- ✓ **Database:** Amazon RDS (PostgreSQL, MySQL), DynamoDB
- ✓ **Authentication:** AWS Cognito, OAuth 2.0, JWT, MFA
- ✓ **Security & Monitoring:** AWS CloudWatch, AWS Secrets Manager, Elasticsearch, Kibana
- ✓ **Message Queues:** Kafka, RabbitMQ
- ✓ **Cloud & DevOps:** AWS EC2, AWS VPC, AWS S3, AWS IAM, AWS Lambda
- ✓ **Infrastructure as Code:** Terraform, Ansible, AWS CloudFormation, AWS CI/CD
- ✓ **Third-Party Integrations:** GitHub, GitLab, Jira, Workday, Slack, AWS Services

 Team Size : 12

Affluent Global Services

Dec' 2019 – Dec-2021

Project 5: Tanla Wisely (India)

Domain	Governance and audit management platform
Client	Microsoft India
Description	Tanla Wisely's Campaign Management Application enables enterprises to run targeted communication campaigns across WhatsApp, SMS, and Truecaller . The system is hosted and deployed on Azure , ensuring scalability, security, and reliability.
Role	Backend Developer

Responsibilities

Backend Development & API Management

- Develop scalable **Django & FastAPI** microservices(6)
- Implement **REST & GraphQL APIs** with token-based authentication
- Optimize APIs for **low latency & high throughput**

SaaS Platform Development

- Architect the system as a **multi-tenant SaaS** application
- Implement **RBAC (Role-Based Access Control)** for user roles
- Extend **ABAC (Attribute-Based Access Control)** for dynamic permissions

Cloud Infrastructure Deployment on Azure

- Deploy the SaaS application on **Azure Kubernetes Service (AKS)**
- Use **Azure Virtual Machines (VMs)** for background services
- Set up **Azure Load Balancer** for handling traffic spikes
- Store media & logs in **Azure Blob Storage**

Database & Data Management

- Use **PostgreSQL** for **structured data** with partitioning
- Manage unstructured campaign logs in **MongoDB (CosmosDB)**
- Optimize data retrieval using **Redis caching**
- Use **Azure Data Lake** for **campaign analytics storage**

Messaging & Event-Driven Processing

- Integrate **Kafka & Azure Event Hub** for high-volume messaging
- Use **RabbitMQ** for **task queues & real-time notifications**
- Implement **ProtoBuf serialization** for efficient data transfer

Access Control – RBAC & ABAC

- **RBAC**: Define user roles & permissions (Admin, User, Manager)
- **ABAC**: Apply dynamic access rules based on **attributes (location, department, campaign type, etc.)**
- Integrate **OAuth 2.0 & JWT authentication**

Campaign Analytics & Reporting

- Extract & process campaign logs using **Pandas & NumPy**
- Generate reports using **Power BI & Matplotlib**
- Store analytics data in **Azure Synapse Analytics**

Third-Party API Integrations

- **WhatsApp API** for automated customer engagement
- **Truecaller API** for caller validation
- **SMS Gateway** integration for mass notifications

DevOps & CI/CD on Azure

- Automate deployments using **Azure DevOps & Terraform**
- Use **Azure Container Registry (ACR)** for Docker image storage
- Set up **Azure Monitor & Application Insights** for performance tracking

Performance Optimization & Scalability

- Implement Redis caching for API acceleration
- Optimize database queries for handling **millions of requests per second**
- Auto-scale services using **Azure Auto-Scaling**

Monitoring & Logging with Kibana & Elasticsearch

- Deploy **Kibana on Azure VM** for **log visualization & real-time monitoring**
- Use **Elasticsearch** to store **logs, system events, and campaign analytics**
- Implement **Logstash or Filebeat** for log aggregation
- Monitor **API performance, errors, and security breaches** in real time

Troubleshooting & Maintenance 🔧

- Set up **Azure Log Analytics & Kibana dashboards** for system health checks
- Fix API failures, database slowdowns & scaling issues
- Work with frontend & DevOps teams for continuous improvements

🔧 Tech Stack

- ✓ Python (Flask) 🐍, Python (Django)
- ✓ Azure AD, Azure Blob Storage, Azure Kubernetes Service (AKS) , Azure Virtual Machines (VMs), Azure DevOps & Terraform, Azure Container Registry (ACR) ☁️
- ✓ PostgreSQL, MongoDB,
- ✓ Stripe, Apple Pay, Google Pay 🍀
- ✓ OAuth2, JWT, ABAC, RBAC, PCI-DSS Compliance 🔒
- ✓ Redis, Celery ,Kafka, RabbitMQ ⚡
- ✓ Docker, AWS CI/CD 🏗️
- ✓ WhatsApp API, Truecaller API, SMS Gateway
- ✓ Kibana, Elasticsearch ,Azure App insight

👥. Team Size : 9

Project 4: Blink Health (USA) ⬆️

Domain	Governance and audit management platform
Client	Blink Health
Description	Blink Health is Online Pharmacy in USA. Create Wallet Platform for Integrated with Apple, Google and strip.
Role	Backend Developer

Responsibilities

✓ Wallet System Architecture & Development

- Designed and developed a **secure and scalable digital wallet** for Blink Health.
- Integrated **AWS cloud infrastructure** to ensure high availability and security.
- Developed **RESTful APIs** to support seamless transactions and wallet management.

✓ Payment Gateway Integration

- Integrated **Apple Pay, Google Pay, and Stripe** for seamless in-app and online payments.
- Implemented **tokenization and encryption** to ensure **PCI-DSS compliance**.
- Developed workflows for **refunds, chargebacks, and payment reconciliations**.

✓ Security & Compliance

- Ensured **HIPAA compliance** for handling sensitive healthcare payment data.
- Implemented **OAuth2 & JWT authentication** for secure transactions.
- Applied **encryption mechanisms** to safeguard user financial data.

✓ AWS Cloud Infrastructure & Scalability

- Utilized **AWS services** such as **EC2, S3, Lambda, RDS (PostgreSQL), and DynamoDB** for a robust backend.
- Deployed services using **AWS API Gateway & AWS Lambda** for serverless transaction processing.
- Set up **IAM roles and security policies** for controlled API access.

✓ Database & Performance Optimization

- Used **PostgreSQL and DynamoDB** for efficient transaction storage and retrieval.
- Optimized **database indexing and query performance** for handling high transaction volumes.
- Implemented **Redis for caching** to improve response times.

✓ Monitoring & Logging

- Set up **AWS CloudWatch** for real-time logging and monitoring.
- Integrated **ELK Stack (Elasticsearch, Logstash, Kibana)** for payment analytics and reporting.
- Implemented **alerting mechanisms** for failed transactions and API errors.

✓ Collaboration & Agile Development

- Worked closely with **frontend, DevOps, and compliance teams** to ensure smooth integration.
- Followed **Agile methodologies (SCRUM)** for sprint-based development and deployment.
- Conducted **code reviews and PR approvals** to maintain code quality and security.

 Tech Stack

- ✓ Python (Flask) 
- ✓ AWS (EC2, S3, Lambda, RDS, API Gateway, CloudWatch, IAM) 
- ✓ PostgreSQL, DynamoDB 
- ✓ Stripe, Apple Pay, Google Pay 
- ✓ OAuth2, JWT, PCI-DSS Compliance 
- ✓ Redis, Celery 
- ✓ Docker, AWS CI/CD

Mo-De(Mode India Private Limited) **Nov' 2014 – Nov- 2019**

Project 3: NANO

Domain	Telecom
Client	Airtel-Nigeria
Description	Get Loan by Using USSD code.

Role	Backend Developer
-------------	-------------------

Responsibilities

- ✓ **Backend Development:** Develop and maintain backend applications using **Python**.
- ✓ **Database Management:** Work with **PostgreSQL** for data storage, writing efficient queries, and basic optimizations.
- ✓ **Web Server Configuration:** Assist in setting up and managing **Nginx** as a reverse proxy.
- ✓ **Application Server Management:** Deploy and configure **Gunicorn** to serve Django applications.
- ✓ **Bug Fixing & Debugging:** Identify and fix application bugs and performance issues.
- ✓ **Basic DevOps Tasks:** Support deployment, server monitoring, and log analysis under guidance.

Tech Stack

Python 3, GitHub, HTML5/CSS, PostgreSQL, JavaScript, PyCharm, Linux, Shell Scripting,

 **Team Size : 8**

Project 2: ACS

Domain	Telecom Fintech
Client	Airtel (Uganda, South Africa,Nigeria, Ghana, Ciz, Camroon), Du(Dubai),OOREDOO(Kuwait,Oman,Indonesia),MTN(South Africa,Sychelss)
Description	Airtime credit system, When User mobile balance is going low then provide small talk time loan by using USSD .
Role	Python Developer

Responsibilities

- ✓ **Backend/Frontend Development:** Develop and maintain backend applications using **Python ,Django MVT and Bootstrap.**
 - ✓ **Database Management:** Work with **PostgreSQL** for data storage, writing efficient queries, and basic optimizations.
 - ✓ **Secure Communication:** Establish **SSH-Tunnel** connections for secure data access between servers.
 - ✓ **Web Server Configuration:** Assist in setting up and managing **Nginx** as a reverse proxy.
 - ✓ **Application Server Management:** Deploy and configure **Gunicorn** to serve Django applications.
 - ✓ **Bug Fixing & Debugging:** Identify and fix application bugs and performance issues.
 - ✓ **Basic DevOps Tasks:** Support deployment, server monitoring, and log analysis under guidance.
-
- ✓ Designed and developed the complete admin module and resolved issues and enhanced the Admin module for more achievements.
 - ✓ Used Python programming and Django for the backend development, Bootstrap for frontend connectivity and MongoDB for database.
 - ✓ Developed a Django ORM module queries that can pre-load data to reduce the number of databases queries needed to retrieve the same amount of data.
 - ✓ Build all Database Mapping classes using Django Generic, Class and functioned based methods.
 - ✓ Used JavaScript's for data validations and designed validations modules.
 - ✓ Developed project's web page as Single Page Application (SPA) by using JavaScript API and build delivery driver application.
 - ✓ File handling for the client data in files like .txt and .xlsx file for data retrieve and storing purpose.
 - ✓ Data Exchanges and sorting as per customer requirement between Database and Files.
 - ✓ Developed views and templates with Django view controller and template to create a user-friendly website interface.
 - ✓ Used PandasAPI to put the data as time series and tabular format for local timestamp datamanipulation and retrieval and storing it into Postgresql.
 - ✓ Build SQL queries for performing various CRUD operations like create, update, read anddelete.
 - ✓ Used Python Library Beautiful Soup for web scrapping to extract data for building graphs
 - ✓ Automated most of the task using python scripting, Unix/Linux shell Scripting.
 - ✓ Managed, developed, and designed a dashboard control panel for customers and Administrators using Django, HTML, CSS, JavaScript, Bootstrap, and JQuery.
 - ✓ Performed troubleshooting, fixed and deployed many Python bug fixes of the two main applications that were a main source of data for both customers and internal customer service team.
 - ✓ Experienced in Agile Methodologies and SCRUM Process.
 - ✓ Developed leadership skills and managing the team spirit.

Tech Stack

Python 3, Django, DjangoMVT, JavaScript Validation, GitHub, HTML5/CSS, Postgresql, JavaScript, Pycharm, Linux, Shell Scripting, JIRA, unit and regression testing, Rest Framework, Data handling and sorting.

 Team Size : 8

Project 1: Monitoring AND Support

Domain	Telecom Fintech
Client	Airtel (Uganda, South Africa, Nigeria, Ghana, Ciz, Camroon), Du(Dubai), OOREDOO(Kuwait, Oman, Indonesia), MTN(South Africa, Sychelss)
Description	Airtime credit system, When User mobile balance is going low then provide small talk time loan by using USSD .
Role	Jr Python Developer

Responsibilities

✓ Linux System Monitoring & Basic Troubleshooting

- Monitor **server health** (CPU, memory, disk usage) and report anomalies.
- Run basic **Linux commands** to check system logs (`journalctl`, `dmesg`, `top`).
- Restart and manage **services (Apache, MySQL, SSH, etc.)** when needed.
- **Redfish API Integration**
- Leverage **Redfish API** to collect low-level **hardware metrics** (CPU, memory, power, thermal, storage) from servers for enhanced health monitoring.
- Integrated Redfish checks into automation scripts for hardware status, chassis state, and BIOS-level insights.

✓ Zabbix Monitoring & Alert Handling

- Set up alerts and thresholds for system and hardware monitoring.
- Integrated **Redfish-based metrics** (fan speed, power supply, temperature) into **Zabbix custom checks**.
- Acknowledge and escalate incidents to senior engineers if required.
- Create simple dashboards in **Zabbix** for better visualization

✓ Bash Scripting for Automation

- Write basic **Bash scripts** for automating repetitive tasks (e.g., log rotation, backups).
- Modify and use **pre-existing scripts** provided by senior engineers.

✓ Ansible Automation Basics

- Learn **Ansible playbook structure** and how to execute simple tasks.
- Use Ansible to **deploy software updates** or manage configurations.

✓ Network & Security Basics

- Understand **basic firewall rules** (`iptables`, `firewalld`).
- Assist in **SSH key management** for secure server access.

✓ Incident Management (L1 Support)

- Monitor and log **alerts from Zabbix, ORTS, and other tools**.

- Provide **first-level troubleshooting** and escalate issues if necessary.
- Document all incidents and resolutions in a **knowledge base**.

Backup & Data Integrity Support

- Learn how to **run backup scripts** and verify backups.
- Assist in **restoring data** when required.

Tech Stack

Linux, Ubuntu, Centos, Debian, Zabbix, Bash Scripting , ssh, ssh-tunnel, nginx, server configurations.

 **Team Size : 13**
